Q31 Imagine yourself in the following scenario. You work at a company where you have recently won an award for talented junior employees. Now, you have been promoted to a mid-level management position. Past employees in this position have often moved into more senior management jobs with the company. Although working in senior management entails longer hours, it comes with a higher salary and more leadership opportunities. You are also married with a two-year old child. Currently, your child is in day-care for about 40 hours per week. If you moved into senior management, your child would need to be in day-care for at least 50 hours per week. For the last several years, your firm has been designated by Forbes magazine as one of the “100 best companies to work for” and has now opened an on-site, high-quality, extended-hours day-care center open from 6:00 AM to 10:00 PM on weekdays. The center is free for employees, but slots are allocated via random lottery. Today you find out that you have not won a day-care slot for your child in the center.

The center is free for employees, but slots are allocated via random lottery. Today you find out that you have not won a day-care slot for your child in the center. Later, you read a news story reporting that in a nationally-representative survey, more than 50% of college-educated women under age 45 said that the ideal situation for women with young children is working part-time outside the home, while 30% said not working at all outside the home. Only 10% said that the ideal situation for women with young children is working full-time.
